

Health Planning and Evaluation

This course introduces the principles and practice of integrated health planning, and evaluates the effectiveness of health policies, planning and services.

This program is shared by postgraduate students in Health and may involve some collaboration between professional development participants and postgraduate students.

At the end of the Workshop Only course, you'll receive a Certificate of Participation documenting your participation in the course.

If you undertake and complete the Workshop and Assessment course, you'll receive a Certificate of Completion upon successful completion of the assessment. This can be used to apply for advanced standing in a related award course

Duration: 4 Days

Certificate of Completion

Cost: From \$1205.16

Evolve with QUTeX

Effective responses from the health system to the major challenges of a rapidly changing world require effective financial, workforce and service planning. Planning is both a technical and political activity.

Who should participate?

Anyone seeking to develop skills and knowledge in the planning of health services, and the translation of health policy into practice.

Core concepts

On completion of this course, you will be able to:

- identify contemporary integrated health planning approaches and explain the linkages between service, workforce, capital (including information and technology), program and corporate strategic planning
- articulate the different ways in which health planning is conceived and practised locally, nationally and internationally and account for these differences
- apply knowledge of health planning skills, principles, processes and tools including when and how to apply these based on the planning context and available resources
- compare and contrast the planning approaches that are used in specialist planning in the areas of service and program planning, with reference to key concepts, planning parameters, planning standards, planning techniques, policy and politics
- determine appropriate evaluation models, methods, processes and tools to compare the actual value of health plans, services and policy with expected outcomes.

Your expert facilitators

Ms Lana Elliott
