The gift of your body could make a real difference to medical innovation
You may be able to make a real difference to medical innovation by donating your body to the Queensland University of Technology (QUT) Body Bequest Program.

The Body Bequest Program is a key component of research, education and training at QUT. It is through the generous gift of their body that members of the public play an important role in the training of health professionals such as surgeons, doctors, nurses and allied health workers.

QUT needs your support to continue this essential training and ongoing research.

What does it mean when you donate your body?

When QUT accepts a donated body it will predominantly be used for training surgeons in new surgical techniques and procedures. This is a vital need for many postgraduate professional qualifications and, importantly, ensures that our medical teams have the opportunity to receive the best training possible. Some bodies will be used for the research of medical conditions and their treatment.

In addition to surgical training and research, some bodies will also be used for anatomy teaching, and may be used for anatomical examination and dissection.

The opportunity to be able to examine a real human body is a privilege, and the ultimate gift that someone can give to science and medicine.

Body bequest procedure

Please contact QUT for a Body Bequest Information Kit that will include additional information and registration forms. Upon the completion and return of the registration forms a potential donor becomes part of the QUT Body Donor Registry.

When a potential donor passes away within the QUT acceptance area, the donor’s body will be transported to QUT.

At the completion of the medical or scientific processes, the body will be cremated at the expense of QUT. The subsequent ashes and remains are then made available to the next of kin.

Please note: QUT is able to accept only the bodies of donors who agree to cremation at the completion of the program.

Acknowledgement of the Body Bequest Program

Book of Remembrance

A list of all Body Bequest donors’ names will be recorded in a book of remembrance that will be kept on permanent display at QUT. If donors wish to remain anonymous and not have their names recorded, their wishes will be respected.

Thanksgiving Service

A memorial service is held regularly in remembrance of those who donated their bodies. These services will give families and next of kin an opportunity to gain closure following the body donation of a loved one. The services will also provide an opportunity for families to meet with staff, students and researchers, and understand how precious and important the act of body donation actually is.

To receive more information

If you would like to receive a Body Bequest Information Kit on how to become a body bequest donor, please complete the form and send it to the address below.
